PROJECT TOPIC: Lost And Found Management System

Programme: MCA

Project Group Members:

1. Sagar (B-45/12584200166.)
2. Harsh Kumar Ojha (B-21/12584200082)
3. Payal Sharma (B-34/12584200137)
4. Gunjan Sharma (B-19/1258420077)

Project Supervisor: Mr. Umakant Ahirwar, Assistant Professor

Objective: The purpose of developing this project is to create a centralized digital platform for managing lost and found items within a campus. The system aims to simplify the process of reporting, searching, and claiming lost belongings. It helps users quickly find their items by providing real-time updates and a structured workflow. The system also ensures security through verification and approval mechanisms, reducing misuse and false claims. Overall, it improves efficiency, transparency, and communication compared to traditional methods.

Tools required:

- **Hardware Requirements:**

- Computer/Laptop (Intel i3 or above)
- Minimum 4 GB RAM (8 GB recommended)
- 256 GB Storage (SSD preferred)
- Internet Connectivity

- **Software Requirements:**

- Frontend: HTML, CSS, JavaScript
- Backend: PHP
- Database: MySQL
- Server: XAMPP
- Web Browser (Chrome/Edge)
- Code Editor (VS Code)

Abstract: The project **"Lost & Found Management System"** is a web-based application designed to manage lost and found items efficiently within an institution. Traditional methods such as notice boards, emails, and messaging groups are often unorganized and slow, leading to delayed recovery and confusion.
This system provides a structured platform where users can report lost or found items, search for belongings, and submit claims. It includes role-based access for Students,

Class Representatives (CRs), and Administrators to ensure proper verification and approval of items and claims. The system maintains a digital record of all activities, enabling easy tracking and reducing the chances of misuse.

With features like centralized data management, status tracking, and secure claim verification, the system improves transparency and reduces manual effort. It enhances communication within the campus and ensures faster recovery of lost items. Additionally, the system can be extended in the future with notification services and mobile support, making it a scalable and practical solution.
